Oral and Maxillofacial Radiology Imaging services

Cone Beam Computed Tomography (CBCT) service is now available at University Dental Health Services to help dentists to provide “cutting edge imaging” for their patients.

Revolutionize your practice with CBCT imaging. We are excited to offer you an advanced imaging modality in **four volumes sizes. A single site, a single jaw, double jaws and full volume** are available to enhance visualization, diagnosis and treatment planning for your patients.

CBCT is a valuable diagnostic tool for treatment planning in implant dentistry, oral pathology, maxillofacial trauma, TMJ and sinus pathology, orthodontic and orthognathic surgical procedures.

Multiplanar 3D and 2D images obtained from the study provide precise information on anatomically accurate data to help you plan your treatment.

The volumetric data obtained from CBCT scans can be used with third party software for surgical planning.

Who We Are

The imaging service department is staffed by a **Medical Radiology Technician**, 2 dental assistants and a Board Certified Diplomate of the American Board of Oral and Maxillofacial Radiology. The Radiologist has numerous publications in peer-reviewed journals and actively reviews scientific journals. The Radiologist is a dedicated educator. We encourage you to contact us if you have any questions about your cases.

We try to make life simpler for you:

1) CD with a viewer and if requested, another CD with DICOM files for surgical guide construction.

2) We can upload your patient’s DICOM files directly to any surgical guide making company of your choice.

3) We image models for free with a patient scan.

4) We send a detailed report by fax and/or mail. We will call you with any urgent results.

5) Our staff is knowledgeable and will be happy to assist you with billing matters.

6) We are always happy to discuss a case with you.

7) If you have the images, we can provide the interpretation only.

8) Fees are very competitive! Call for pricing and how to prescribe a scan.

Quality and service

We calibrate our machines for optimal quality images and accurate measurements.

Other imaging services like Panoramic, Cephalometric and intraoral digital radiographs are also available. All images can be sent on a CD.

All imaging is accompanied by an interpretation report by a board certified radiologist. For more information call [\(412\) 648-8612](tel:4126488612).
