Lab News

The Dental Registry and DNA Repository has supported an investigation to genetics contributors to chronic periodontitis. As part of collaboration between Dr. Vieira, Dr. Cristiano Susin at University of Georgia, and Dr. Jose Granjeiro at the Brazilian Institute of Metrology, Quality and Technology, statistical evidence for a contribution of a locus in chromosome 16 was unveiled. Chronic periodontitis affects 47% of the US population and continues to be a main cause of tooth loss. One can find the complete report at <http://www.biomedcentral.com/1472-6831/14/84>

Summary of meta-analysis of three population datasets showing a protective effect of an allele in 16q22.3 against chronic periodontitis.

Upcoming Events

Dean's Summer Scholars

Journal Club

When: July 28, August 4, 11, 18

Time: 9:00 AM

Where: Salk Room 403

Vieira Lab Meeting

When: Monday, August 4

Time: 10:00 AM

Where: Salk Room 403

Katelyn Hilands will present.

DRDR Update

Tables show running totals of patient recruitment

Subject Recruitment Location

Module 1	1150	Emergency Care	68	UDHS	8
Module 2	1488	Oral Surgery	43	Orthodontics	150
Module 3	544	Pediatric Dentistry	259	Other	87
Module 4	253	Implant Center	15	AEGD	22
Dental Hygiene	287	Prosthodontics	47	Perio	20
Endo	59	Affected by Digestive Disease	52	Not Affected by Digestive Disease	66

Recruitment Summary

Subjects Recruited	4500
Subjects Declined	745
Compliance Rate	86%
