Lab News

The Dental Registry and DNA Repository (DRDR) celebrates its 10th anniversary this month. The first sample was collected on September 11, 2006 in Module 2 under the supervision of Dr. Wankiiri-Hale here at the School of Dental Medicine.

The DRDR has increasingly supported student research and learning in addition to faculty research in the School of Dental Medicine. The patients that participate in the DRDR are often highly motivated and provide us with positive feedback as shown in the photo.

For more information about the DRDR, please visit our page on the School of Dental Medicine website:
